                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is that of the coding region of cDNA encoding human interleukin-1 zeta (IL-1 zeta, see AAY95297), a member of the IL-1 family. The sequence was deduced from EST IMAGE clone 1628791, which encodes a partial open reading frame, and from additional sequences obtained from PCR and 5' RACE reactions. IL-1 zeta mRNA is generated from exons 3-6 of the IL-1 zeta locus. The mRNA is expressed most strongly in the testis, prostate, colon, is directed to novel, purified and isolated IL-1 zeta, IL-1 zeta splice variants and Xrec2 polypeptides (see AAY95297-301), the nucleic acids (see AAA27918-22) encoding such polypeptides, processes for production of recombinant forms of such polypeptides, and their uses. IL-1 zeta nucleic acids are used to: to express IL-1 zeta polypeptides; as probes to identify nucleic acids encoding proteins of the IL-1 ligand family; to identify human chromosome 2; to map genes on chromosome 2; to identify genes associated with chromosome a such as glaucoma, ectodermal dysphasia, insulin-dependent diabetes mellitus, wrinkly skin syndrome, T-cell leukaemia or lymphoma, and tibial muscular dystrophy; as single-stranded sense or antisense oligonucleotides to inhibit expression of IL-1 zeta polypeptides; to help detect defective genes in an individual; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Ma

PPRESULT PRESULT PRESU
                                  CC The present sequence is that of the coding region of cDNA encoding CC splice variant TDZ.2 (testis-derived zeta variant, see AAY95300) of Chuman interleukin-1 zeta (IL-1 zeta). TDZ.2 mRNA is generated from CC exons 1, 4, 5 and 6 of the IL-1 zeta locus on chromosome 2, and CC The encoded protein is probably a functional IL-1 like molecule. CC TDZ.2 mRNA is expressed most strongly in the testis and bone marrow. CC The invention is directed to novel, purified and isolated IL-1 CC zeta, its splice variants and xrec2 polypeptides (see AAY95297-301), the nucleic acids (see AAA27918-22) encoding such polypeptides, CC and their uses. TDZ.2 nucleic acids are used to: to express TDZ.2 cc polypeptides; as probes to identify nucleic acids encoding CC proteins of the IL-1 ligand family; to identify genes associated with diseases, syndromes, or other conditions associated with chromosome C2; such as glaucoma, ectodermal dysplasia, insulin-dependent Cdiabetes mellitus, wrinkly skin syndrome, T-cell leukaemia or lymphoma, and tibial muscular dystrophy; as single-stranded sense C2 cor antisense oligonucleotides to inhibit expression of TDZ.2 cor gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Interleukin

An isolated nucleic acid molecule encoding an interleukin-1-like C polypeptide (IL-1lp) that retains one or more activities of the peptide C from which it is derived, such as the IL-18R binding activity of a human C interleukin-1 receptor antagonist-1 (HIL-1Ral) polypeptide, is new. The C interleukin-1 receptor antagonist-1 (HIL-1Ral) polypeptide, is new. The C nucleic acids may be used in molecular engineering applications, e.g. C hybridization assays and chromosome and gene mapping studies, for recombinantly producing the IL-11p polypeptide or for producing gene knock out animals to study the role of the protein in metabolism and C disease processes (conversely, gene therapy protocols may be used to supplement a patients production of the polypeptide or to rectify mutations that lead to the production of in active peptides). The peptides produced may be used to screen for and produce modulators (e.g. antibodies) of IL-11p protein expression and activity which may be used to treat disorders associated with inappropriate IL-11p expression and activity, such as inflammatory disorders, asthma, arthritis, osteoarthritis, sepsis, acute lung injury, adult respiratory distress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         В

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC The present sequence is that of the coding region of cDNA encoding CC splice variant TDZ.1 (testis-derived zeta variant, see AAY55299) of CC human interleukin-1 zeta (IL-1 zeta). TDZ.1 mRNA is generated from CC exons 1, 2, 4, 5 and 6 of the IL-1 zeta locus on chromosome 2, and CC TDZ.1 mRNA is expressed most strongly in the kidney, skeletal CC muscle, testis, prostate, ovary, colon, small intestine, liver, placenta, lung, tonsil, foetal liver, lymph node and bone marrow. The invention is directed to novel, purified and isolated IL-1 ceta, its splice variants and xrec2 polypeptides (see AAY55297-301), CC the nucleic acids (see AAA27918-22) encoding such polypeptides, CC and their uses. TDZ.1 nucleic acids are used to: to express TDZ.1 color, such as grobes to identify nucleic acids encoding CC polypeptides; as probes to identify nucleic acids encoding CC polypeptides; as probes to identify genes associated with CC diabetes mellitus, wrinkly skin syndrome, T-cell leukaemia or lymphoma, and tibial muscular dystrophy; as single-stranded sense cor antisense oligonucleotides to inhibit expression of TDZ.1 collypeptides; to help detect defective genes in an individual; and collypeptides; to help detect defective genes in an individual; and
                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                     (b) comprises at least one sequence selected from: AAY91885); and AAY91904-06. The preferred 12 consecutive amino acid segment is chosen from AAY91907-18 or AAY91919-21. IL-1-zeta is likely to play a role in systemic inflammatory reactions, such as fever, hypoglycemia, reduced plasma iron and zinc, the acute response of the liver, and increase plasma copper. IL-1-zeta binding compounds (comprising antigen binding sites) and IL-1-zeta polypeptides are also useful for both diagnostic are therapeutic purposes.
                                                                                                                                                                                                                                                                                          WPI; 200

The IL-1H4 polypeptide can be expressed by standard recombinant methodology. The IL-1H4 polypeptide, polynucleotides and modulators are useful for treating chronic and acute inflammation, septicemia, autoimmune diseases (e.g., inflammatory bowel disease, psoriasis and arthritis), transplant rejection, graft versus host disease, infection, stroke, ischemia, acute respiratory disease syndrome, allergies, asthma, restenosis, brain injury, AIDS, bone diseases (e.g., osteoporosis), cancer (e.g., lymphoproliferative disorders), congestive heart failure, atherosclerosis and Alzheimer's disease. The IL-1H4 polypeptide of the invention.
